

Dahm-won Heo | Seoul, Republic of Korea | +82 10 7930 0959 | abby.dw.heo@gmail.com | Portfolio: <https://abbyheo.github.io/>

Deployment-focused PM who turns ambiguous operational problems into systems teams can run, from diagnosis through production rollout.

WORK EXPERIENCE

Project Manager | Crowddata, a Crowdworks AI company | On-site, Seoul, South Korea | 04.2025–02.2026

Physical AI Data Operations Scale-up | 09.2025–02.2026

- Embedded directly into the lead research company as part of a 10-party consortium (KRW 34B in government funding), where I helped define and scale Physical AI data collection and review operations.
- Diagnosed researcher-based review as the primary scale constraint; designed an Initial Reviewer tier for first-pass, video-based checks on top of the lead research company's existing sensor-based auto-QC, enabling flagged segments to be verified so that only uncertain cases were escalated to Data PMs and unresolved cases to Head Researchers.
- Defined a task/subtask semantic layer, adopted into the demo platform with engineering input, that decomposed robot task runs into ordered subtasks, each with granular success criteria, enabling segment-level review, pinpointing failure-prone subtasks, and identifying salvageable segments rather than discarding entire episodes on a pass/fail basis.
- Led benchmarking of Physical AI data collection and physics-based simulation platforms to close an in-house capability gap, including on-site visits to Chinese robotics companies, and distilled the findings into platform requirements, storage and ingestion guidelines, and buy-versus-build recommendations.

English Exam Content DX | 04.2025–08.2025

- Took ownership of a delivery the client had flagged as <50% usable; co-managed 100+ workers and 1 data engineer as one of two PMs, recovering output to ~85% by fixing data integrity first, then to near-zero defects with no escalations by scaling capacity and adding pre-delivery QC.
- Designed a position-based traceability system using item order within each PDF and page, resolving legacy data integrity issues caused by missing question-answer matching keys and tracing mismatches to a specific workbook, page, and question position.
- Built an AI-assisted extraction pipeline (Gemini Pro Vision API + custom prompting) to digitize scanned PDF answer sheets into structured fields (layout column, answer value, explanation) across 200K+ items at 20K–30K items per delivery cycle, iterating prompts and schema based on reviewer QC feedback on first-pass extraction.
- Shipped a browser-only QC viewer for workbook JSON files, giving PMs, data engineers, and first-pass reviewers a shared way to inspect rendered question output and underlying JSON structure locally, without uploading data to a backend.

QA Assistant | Sendbird | Hybrid, Seoul, South Korea | 07.2023–07.2024

- Structured Advanced Moderation rule logic (event triggers, channel scope, counting windows, action types) into a specification document and few-shot rule examples for LLM-based test case generation, cutting authoring time by ~80% and post-release issues by 60%+.
- Evaluated LLM-based CS chatbots against RAG quality rubrics (accuracy, relevance, consistency, bias), identifying failure patterns that informed prompt-engineering fixes intended to improve performance and reduce churn risk.
- Spearheaded vendor selection and onboarding for an Indonesia-based QA expansion, running the process in English with no engineering support, and reduced project completion time by 40%+.

Data & Model Quality QA, Speech & TTS | Neosapience | Hybrid, Seoul, South Korea | Contract, project-based

English TTS Dataset QA | 07.2022–10.2022

- Curated and validated English TTS training datasets, analyzed recurring pronunciation errors, and authored an internal QA playbook that standardized reviews and reduced pronunciation error rates by 30%+.

AI Voice Character Speech Refinement | 02.2023–03.2023

- Refined speech data to improve naturalness for AI voice characters in a weekly release pipeline, supporting the launch of roughly 10 characters over the contract period.

Query Creator & Evaluator | Appen | Remote | 11.2021–06.2022 | Contract, project-based

- Created and reviewed Korean intent-query data for a smart-home virtual assistant dataset, and documented linguistic edge cases and labeling rules for contributor consistency.

EDUCATION

MicroMasters in Analytics: Essential Tools and Methods | Georgia Tech | Online | Aug 2026 – Present

- Coursework: *Computing for Data Analysis, Data Analytics in Business*

Juris Doctor | Ewha Womans University, School of Law | Seoul, South Korea | 2013–2017

Bachelor of Arts in Political Science & Diplomacy | Yonsei University | Seoul, South Korea | 2008–2012

- Exchange Student: *University of California, Santa Barbara (2010)*

SKILLS & LANGUAGES

SQL & Data: BigQuery matching, joins, validation logic | **Python:** API integration, data extraction pipelines, validation logic (Pandas)

Data Operations: QC workflow design, defect analysis, metadata/schema design, ontology-based workflow modeling | **Tools:** Palantir Foundry (ontology and link type design, Workshop apps), MCP (v0, Notion), Cursor AI, Jira, Confluence, Slack

Languages: Korean (native), English (fluent), French (intermediate)
