

Dahm Won Heo | Seoul, Republic of Korea | +82 10 7930 0959 | abby.dw.heo@gmail.com

Operations and workflow builder who finds the structural problem others missed and turns it into a process that works at scale.

WORK EXPERIENCE

Project Manager | Crowddata, a Crowdworks AI company | Seoul | 04.2025–02.2026

Physical AI Data Operations Scale-up | 09.2025–02.2026

- Contributed to a consortium proposal (10+ industry and academia participants) that secured KRW 34B in government funding. Was the only data-pipeline partner seconded directly to the lead research company, where I defined the data operating model and oversaw large-scale Physical AI data collection and review operations.
- Diagnosed researcher-based review as the primary scale constraint; designed a frontline reviewer tier on top of the lead research company's existing sensor-based auto-QC, enabling flagged segments to be verified against video before only uncertain cases were escalated to Data PMs and unresolved cases to Head Researchers.
- Proposed a task/subtask semantic layer that decomposed robot task runs into ordered subtasks, each with granular success criteria, enabling segment-level review, pinpointing failure-prone sub-tasks, and identifying salvageable segments, rather than discarding entire episodes on a pass/fail basis.
- Led field and vendor benchmarking across Physical AI data collection and physics-based simulation platforms, including China robotics company visits and engagement with a leading physics-based simulation vendor to fill an in-house capability gap; distilled findings into platform requirements, storage/ingestion guidelines, and buy-vs-build decisions.

English Exam Content DX | 04.2025–08.2025

- Took ownership of a delivery the client had flagged as <50% usable; co-managed a team of 100+ workers and 1 data engineer to recover it to ~85% in phase 1, then to near-zero critical defects with no escalations in phase 2.
- Designed a two-level surrogate identifier (position within PDF, position within page) to make tag mismatches traceable: replacing full-document manual searches with position-based diffing against a one-time manual baseline per workbook.
- Built an AI-assisted extraction pipeline (Gemini Vision Pro API + custom prompting) to digitize scanned PDF answer sheets, pulling structured fields (question number, answer key, column layout) from 200K+ items at 20K–30K items per delivery cycle.
- Shipped a browser-only QC viewer for workbook JSON files, giving PMs, data engineers, and first-pass reviewers a shared way to inspect raw JSON, rendered question output, and question-level structure locally without uploading data to a backend.

QA Assistant | Sendbird | Hybrid, Seoul, South Korea | 07.2023–07.2024

- Structured Advanced Moderation rule logic (event triggers, channel scope, counting windows, action types) into a spec; used it as few-shot examples to generate test cases via LLM, cutting authoring time by ~80% and post-release issues by 60%+.
- Evaluated an LLM customer-support chatbot with RAG quality rubrics for accuracy, relevance, consistency, and bias; worked with PM and ML engineers on follow-up improvements.
- Led vendor selection and onboarding for an Indonesia-based QA expansion; created English documentation and reduced project completion time by 40%+.

Data & Model Quality QA, Speech & TTS | Neosapience | Hybrid, Seoul, South Korea | Contract, project-based

English TTS Dataset QA | 07.2022–10.2022

- Curated and validated English TTS training datasets, analyzed recurring pronunciation errors, and shared error patterns with research engineers to guide fixes.
- Authored and maintained an internal QA playbook for reviewing contributor work, standardizing reviews, and reducing pronunciation error rates by 30%+.

AI Voice Character Speech Refinement | 02.2023–03.2023

- Refined speech data to improve naturalness for AI voice characters in a weekly release pipeline, supporting the launch of roughly 10 characters over the contract period.

Query Creator & Evaluator | Appen | Remote | 11.2021–06.2022 | Contract, project-based

- Created and reviewed Korean intent-query data for a smart-home virtual assistant dataset, checking alignment with assigned intents and required details.
- Documented Korean linguistic edge cases and labeling rules so contributors could apply the guidelines more consistently.

EDUCATION

Ewha Womans University, School of Law | *J.D.* | 03.2013–02.2017

Yonsei University | *B.A. Political Science & Diplomacy* | 03.2008–08.2012 | Study abroad: University of California, Santa Barbara (03.2010–02.2011)

SKILLS & LANGUAGES

SQL & Data: BigQuery matching, joins, validation logic

Python: Pandas for basic data validation

Data Operations: QC workflow design, defect analysis, metadata/schema design, ontology-based workflow modeling

Tools: Cursor AI, Jira, Confluence, Google Sheets, Slack

Languages: Korean (native), English (fluent), French (intermediate)
