

Work Experience

Project Manager (Data Programs) | Crowddata, a Crowdworks AI company | On-site, Seoul, South Korea | 04.2025 – 02.2026

English Exam Content DX (04.2025 – 08.2025)

- ◆ Built an AI-assisted extraction pipeline (Document AI + Gemini multimodal + custom prompting) to extract answer keys from a corpus of 200K+ English exam questions in PDF format, processing ~15K–20K items/week at 90%+ extraction accuracy.
- ◆ Resolved legacy data integrity issues (missing question–answer keys) by designing surrogate identifiers and implementing matching/validation logic in Google BigQuery (SQL).
- ◆ Prototyped a QA web viewer with Cursor AI to surface per-item rendering defects and standardize triage across PM/DE/reviewers (Quill.js-like UI; JSON delta compatibility), reducing rework and stabilizing releases.
- ◆ Recovered a failing delivery flagged by the client as ‘<50% usable’ to ~85% after phase 1 (QC gates).
- ◆ Stabilized quality after phase 2 (QC viewer + triage) with no material escalations; internal hybrid sampling (random + stratified) showed near-zero critical defects.

Physical AI Data Ops Scale-up (09.2025 – 02.2026)

- ◆ Defined an end-to-end operating model (scenario/task → collection → QC → storage/packaging) and removed the key scale bottleneck by introducing a tiered, video-first review workflow (general reviewers → researcher escalation), reducing researcher load and enabling scalable data collection.
- ◆ Conducted external vendor research to inform platform and data strategy — including on-site benchmarking at leading Chinese robotics companies and simulation-based collection feasibility (Isaac Sim); led end-to-end engagement from scenario authoring and scene configuration to cost estimation.
- ◆ Designed QC gates and a manipulation data checklist (success/failure criteria, defect taxonomy, sensor/video sync, drop/collision handling), reducing rework/discard risk.
- ◆ Established metadata/schema standards and researched industry data formats (LeRobot, MCAP/OWA-MCAP) through vendor sample analysis; authored internal guidelines for storage and ingestion.
- ◆ Led cross-functional/vendor collaboration (teleop/simulation/infrastructure) through requirements specs, technical sessions/Q&A, and decision logs to align stakeholders and shorten delivery lead times.

QA Assistant | Sendbird | Hybrid, Seoul, South Korea | 07.2023 – 07.2024

- ◆ Led QA for Advanced Moderation, defining test strategy and acceptance criteria with cross-functional teams; reduced post-release issues/complaints by 60%+.
- ◆ Built an LLM-assisted test case generation workflow (prompting + structured specs), cutting test authoring time by ~80% while improving coverage.
- ◆ Evaluated and iteratively improved an LLM customer-support chatbot (RAG) using quality rubrics (accuracy/relevance/consistency/bias), partnering closely with PM/ML engineers.
- ◆ Owned vendor selection and onboarding for an Indonesia-based QA expansion; created English documentation and accelerated ramp-up/throughput.

Data & Model Quality QA (Speech/TTS) | Neosapience | Hybrid, Seoul, South Korea

07.2022 – 10.2022 (Contract, project-based)

- ◆ Built and QA'ed English TTS training datasets; analyzed recurring pronunciation error patterns and partnered with research engineers on corrective guidance.
- ◆ Authored and maintained an internal QA playbook to reduce rework and improve consistency; contributed to 30%+ reduction in pronunciation error rates.

02.2023 – 03.2023 (Contract, project-based)

- ◆ Refined and tuned speech data to improve naturalness for ~10 AI voice characters launched.

Query Creator & Evaluator | Appen | Remote | 11.2021 – 06.2022 (Contract, project-based)

- ◆ Created and validated Korean utterances for a smart-home virtual assistant dataset; ensured required information coverage and reduced ambiguity via updated guidelines.
- ◆ Categorized Korean linguistic edge cases and documented labeling rules to improve consistency across contributors.

Education

Ewha Womans University, School of Law | J.D. | Seoul, South Korea | 03.2013 – 02.2017

Yonsei University | B.A. Political Science & Diplomacy | Seoul, South Korea | 03.2008 – 08.2012

- ◆ Study abroad: University of California, Santa Barbara (03.2010–02.2011)

Skills

- ◆ SQL: BigQuery (joins, aggregations, data matching & validation)
- ◆ Python: data validation & automation scripting (pandas)
- ◆ Data Quality: sampling QA, defect triage, acceptance criteria
- ◆ Tools: Jira, Confluence, Google Sheets, Slack
- ◆ Languages: Korean (native), English (fluent), French (intermediate; DELF B2)
