

Dahm Won Heo | Seoul, Republic of Korea | +82 10 7930 0959 | abby.dw.heo@gmail.com

Data operations and workflow builder helping customers diagnose messy data problems and turn them into actionable workflows.

WORK EXPERIENCE

Project Manager, Data Programs | Crowddata, a Crowdworks AI company | Seoul | 04.2025–02.2026

Physical AI Data Operations Scale-up | 09.2025–02.2026

- Contributed to a consortium proposal that secured KRW 34B in government funding; defined the data operating model across 10+ industry and academia participants, overseeing large-scale robotics data collection and review operations on secondment to the lead research company.
- Diagnosed researcher-based review as the primary scale constraint; designed a frontline reviewer tier on top of the lead research company's existing sensor-based auto-QC, enabling flagged segments to be verified against video before only uncertain cases were escalated to Data PMs and unresolved cases to Head Researchers.
- Proposed a task/subtask semantic layer that decomposed robot task runs into ordered subtasks, each with granular success criteria, enabling segment-level review, pinpointing failure-prone sub-tasks, and identifying salvageable segments, rather than discarding entire episodes on a pass/fail basis.
- Led field and vendor benchmarking across robotics data collection and physics-based simulation platforms, including China robotics company visits and engagement with a leading physics-based simulation vendor to fill an in-house capability gap; translated findings into platform requirements, storage/ingestion guidelines, and buy-vs-build decisions.

English Exam Content DX | 04.2025–08.2025

- Took ownership of a delivery the client had flagged as <50% usable; co-managed a team of 100+ workers and 1 data engineer to recover it to ~85% in phase 1, then to near-zero critical defects with no escalations in phase 2.
- Designed a two-level surrogate identifier (position within PDF, position within page) and BigQuery logic that flagged missing, mismatched, or reordered tags between question book and answer sheet PDFs by diffing tag counts against a one-time manual baseline per page, instead of manually searching the whole document each time.
- Built an AI-assisted extraction pipeline (Document AI + Gemini multimodal parsing + custom prompting) to digitize scanned PDF answer sheets, pulling structured fields (question number, answer key) from 200K+ items at 90%+ accuracy and 15K–20K items per week.
- Shipped a browser-only QC viewer for workbook JSON files, giving PMs, data engineers, and first-pass reviewers a shared way to inspect raw JSON, rendered question output, and question-level structure locally without uploading data to a backend.

QA Assistant | Sendbird | Hybrid, Seoul, South Korea | 07.2023–07.2024

- Structured Advanced Moderation rule logic (event triggers, channel scope, counting windows, action types) into a spec; used it as few-shot examples to generate test cases via LLM, cutting authoring time by ~80% and post-release issues by 60%+.
- Evaluated an LLM customer-support chatbot with RAG quality rubrics for accuracy, relevance, consistency, and bias; worked with PM and ML engineers on follow-up improvements.
- Led vendor selection and onboarding for an Indonesia-based QA expansion; created English documentation and reduced project completion time by 40%+.

Data & Model Quality QA, Speech & TTS | Neosapience | Hybrid, Seoul, South Korea | Contract, project-based

English TTS Dataset QA | 07.2022–10.2022

- Built and validated English TTS training datasets, analyzed recurring pronunciation errors, and shared error patterns with research engineers to guide fixes.
- Authored and maintained an internal QA playbook for reviewing contributor work, standardizing reviews, and reducing pronunciation error rates by 30%+.

AI Voice Character Speech Refinement | 02.2023–03.2023

- Refined speech data to improve naturalness for approximately 10 AI voice characters that were later launched.

Query Creator & Evaluator | Appen | Remote | 11.2021–06.2022 | Contract, project-based

- Created and reviewed Korean intent-query data for a smart-home virtual assistant dataset, checking alignment with assigned intents and required details.
- Documented Korean linguistic edge cases and labeling rules so contributors could apply the guidelines more consistently.

EDUCATION

Ewha Womans University, School of Law | J.D. | 03.2013–02.2017

Yonsei University | B.A. Political Science & Diplomacy | 03.2008–08.2012 | Study abroad: University of California, Santa Barbara (03.2010–02.2011)

SKILLS & LANGUAGES

SQL & Data: BigQuery matching, joins, validation logic

Python: Pandas validation & analysis

Data Operations: QC workflow design, defect analysis, metadata/schema design, ontology-based workflow modeling

Tools: Cursor AI, Jira, Confluence, Google Sheets, Slack

Languages: Korean (native), English (fluent), French (intermediate)
